

Quarantine

Quarantine if you have been in [close contact](#) (within 6 feet of someone for a cumulative total of 15 minutes or more over a 24-hour period) with someone who has COVID-19, unless you have been [fully vaccinated](#). People who are fully vaccinated do NOT need to quarantine after contact with someone who had COVID-19 unless they have [symptoms](#). However, fully vaccinated people should get tested 3-5 days after their exposure, even if they don't have symptoms and wear a mask indoors in public for 14 days following exposure or until their test result is negative.

What to do

- Stay home for 14 days after your last contact with a person who has COVID-19.
- Watch for fever (100.4°F), cough, shortness of breath, or [other symptoms](#) of COVID-19.
- If possible, stay away from people you live with, especially people who are at [higher risk](#) for getting very sick from COVID-19.

After quarantine

- Watch for symptoms until 14 days after exposure.
- If you have symptoms, immediately self-isolate and contact your local public health authority or healthcare provider.
